# Software Standards at the Example of the Message Passing Interface (MPI)

Martin Schulz

Lawrence Livermore National Laboratory

Chair of the MPI Forum

http://www.mpi-forum.org/

4th ENES HPC Workshop, April 7th, 2016

# The Message Passing Interface (MPI)

- MPI is an the API specification for message passing
  - Targeted at distributed process environments
  - Available on basically any HPC platform
  - Vendor and platform agnostic just an API specification
  - Bindings for C, C++ (for a while), a various Fortran variants
- Basic Features (MPI-1)
  - Operations for sending and receiving messages
  - Support for asynchronous messages
  - Collective operations (for optimization)
  - Communication based on communicators (collection of processes)
- Later additions (MPI-2/3)
  - Support for I/O
  - One-sided communication (RMA)
  - Dynamic processes (although, without much uptake)
  - Non blocking and neighborhood collectives

## What it is Not / General Misconceptions

- MPI ≠ SPMD
  - Most programs are written in SPMD or BSP style
  - BUT: MPI supports any style that requires message exchanges
- MPI ≠ ABI
  - MPI only specifies an API, but, e.g., not the types used
  - WHY? Enables widely varying implementations
- MPI ≠ Fixed environment
  - The MPI standard explicitly omits standardization of the environment
  - Example: "mpirun" is just a suggestion
  - WHY? Enables portability
- MPI ≠ Fixed forever (and hence dead for exascale)
  - MPI is a living standard that can be modified
  - BUT: additions must be based on "Best Practices"

### Participate and help us evolve MPI

## MPI: How It All Began

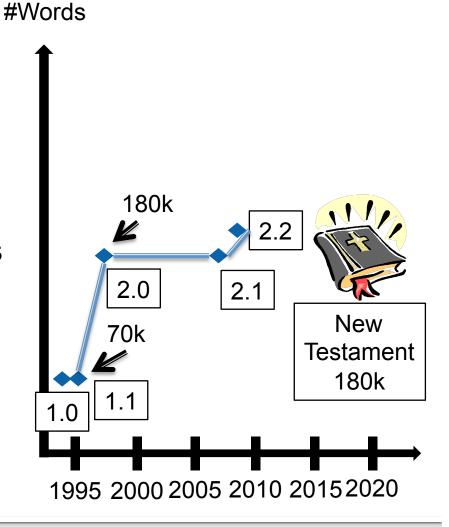

- Multiple message passing APIs in the late 80's
  - Increasing importance of distributed memory machines
  - Parallel Virtual Machine (PVM), LAM, P4
  - Wide range of vendor APIs
- Workshop on Standards for Message Passing in a Distributed Memory Environment
  - Held on April 29-30, 1992 in Williamsburg, Virginia
  - Led to very early strawman draft
  - Follow-on organization at Supercomputing 1992
- Group of interested people got together after that
  - Meeting in person every 6 weeks for 9 months
  - Comment draft by Supercomputing 1993
  - First version ratified by May 1994

## The Growth of the MPI Standard

- MPI 1.0 May 1994 228 pages
- MPI 1.1 Nov 1995 238 pages (128 functions)
- MPI 2.0 Nov 1997 608 pages

# 10 year break

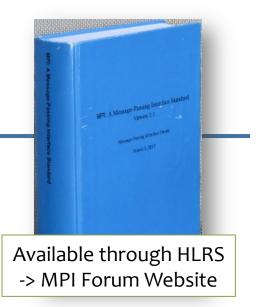

- MPI 2.1 June 2008 608 pages
  - Merged document
- MPI 2.2 Sep 2009 647 pages
  - Small, conforming additions
- In parallel, start on MPI 3.0
  - Major new concepts
  - Mainly driven by working groups

### The Latest Versions

- MPI 3.0 ratified in September 2012
  - Available at <a href="http://www.mpi-forum.org/">http://www.mpi-forum.org/</a>
  - Several major additions compared to MPI 2.2
- MPI 3.1 ratified in June 2015
  - Inclusion for errata (mainly RMA, Fortran, MPI\_T)
  - Minor updates and additions (address arithmetic and non-block. I/O)
  - Adaption in most MPIs progressing fast

## MPI 3.0 has 430 Functions

## Major Additions to MPI 3

- Non-blocking collectives
- Neighborhood collectives
- RMA enhancements
- Shared memory support
- MPI Tool Information Interface
- Non-collective communicator creation
- Fortran 2008 Bindings
- New Datatypes
- Large data counts
- Matched probe
- Non-blocking I/O

## MPI-3.1 Impl. as of November 2015 (thanks to Pavan Balaji)

Release dates are estimates and are subject to change at any time.

Empty cells indicate no *publicly announced* plan to implement/support that feature.

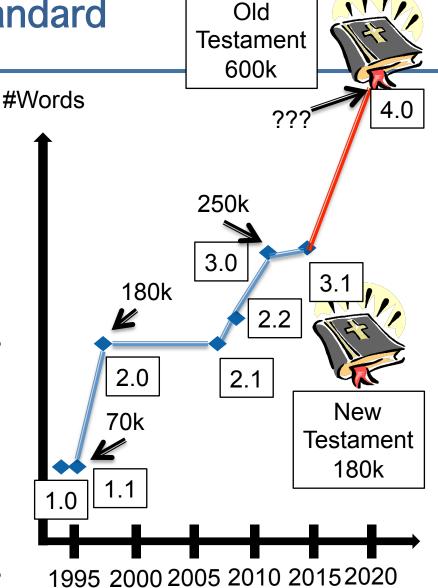

Platform-specific restrictions might apply for all supported features

## The Growth of the MPI Standard

- MPI 1.0 May 1994 228 pages
- MPI 1.1 Nov 1995 238 pages (128 functions)
- MPI 2.0 Nov 1997 608 pages

# 10 year break

- MPI 2.1 June 2008 608 pages
  - Merged document
- MPI 2.2 Sep 2009 647 pages
  - · Small, conforming additions
- MPI 3.0 Sep 2012 852 pages
- MPI 3.1 June 2014 868 pages

## Towards MPI 4.0

- Deliberate decision to continue after MPI 3.0
  - Major points not included in MPI 3
  - Continued interest in participation
  - Adjustment of meeting schedule
- Several major initiatives
  - Fault tolerance
  - Support for hybrid models
  - MPI Sessions to enable isolation
  - Hints and asserts
  - Persistent collectives
  - Advances in tool interfaces
- Tradeoffs
  - Useful extensions vs. unlimited growth
  - General standard vs. additions for particular use cases

## The MPI Forum Drives MPI

- Standardization body for MPI
  - Group of volunteers paid by their home organizations
  - Intended to be a good mix
    - Implementors, users and user communities, HPC centers (procurements)

# MPI Forum Participants (list for MPI 3.0)

## The MPI Forum Drives MPI

- Standardization body for MPI
  - Group of volunteers paid by their home organizations
  - Intended to be a good mix
    - Implementors, users and user communities, HPC centers (procurements)
- Organization consists of chair, secretary, convener, steering committee, and member organizations
  - Plus working groups and chapter committees
- Tasks
  - Discusses additions and new directions
  - Oversees the correctness and quality of the standard
  - Enforces the "Best Practice" rules
  - Ensures "minimality"
  - Represents MPI to the community
  - Holds events like BoFs at SC or ISC

## Rules of the MPI Forum

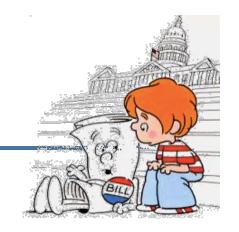

- Evolved over the years
  - Free form in the beginning
  - Hear-say rules with some notes in a side document
  - Since MPI 3: evolving formal rule document
- MPI rules are public and available on the website
  - Mainly deals with memberships and voting procedures
  - Published under open source license and intended to be reused
- Open membership
  - Any organization is welcome to participate
  - Consists of working groups and the actual MPI forum
  - Physical meetings 4 times each year (3 US, one at EuroMPI/Asia)
    - Working groups meet between forum meetings (via phone)
    - Plenary/full forum work is done mostly at the physical meetings
  - Voting rights depend on attendance
    - An organization has to be present two out of the last three meetings (incl. the current one) to be eligible to vote

## Differences to Other Standards

- MPI is not backed by a formal legal entity
  - No organization like ISO or IEEE
    - · Provides more flexibility and allows quicker turn-around
    - Market too small
  - Copyrights held in good faith by universities
  - Makes financial transaction hard
  - No "official" membership or membership dues
- Closest comparison: OpenMP
  - Closed (for pay) membership
  - Legal entity governed by the member organizations
  - Pro:
    - Easier rules for defining members, votes, ...
    - Allows for procedures like phone votes
  - Cons:
    - More heavy weight, legal costs, ...
    - Only possible with much stronger industry participation

# Typical Way to Add Items to MPI

- 1. New items should be brought to a matching working group for discussion
  - Creation of preliminary proposal
  - Simple (grammar) changes are handled by chapter committees

# **Current Working Groups**

#### Collectives & Topologies

- Torsten Hoefler, ETH
- Andrew Lumsdaine, Indiana

#### Fault Tolerance

- Wesley Bland, ANL
- Aurelien Bouteiller, UTK
- Rich Graham, Mellanox

#### Fortran

Craig Rasmussen, U. of Oregon

#### Generalized Requests

Fab Tillier, Microsoft

#### Hybrid Models

Pavan Balaji, ANL

#### I/O

- Quincey Koziol, HDF Group
- Mohamad Chaarawi, HDF Group

#### Large count

Jeff Hammond, Intel

#### Persistence

Anthony Skjellum, Auburn Uni.

#### Point to Point Comm.

- Dan Holmes, EPCC
- Rich Graham, Mellanox

#### Remote Memory Access

- Bill Gropp, UIUC
- Rajeev Thakur, ANL

#### Sessions

Jeff Squyres

#### Tools

- Kathryn Mohror, LLNL
- Marc-Andre Hermans, RWTH Aachen

# Typical Way to Add Items to MPI

- 1. New items should be brought to a matching working group for discussion
  - Creation of preliminary proposal
  - Simple (grammar) changes are handled by chapter committees
- 2. Socializing of idea driven by the WG
  - Could include plenary presentation to gather feedback
    - Focused on concepts not details like names or formal text
  - Make proposal easily available through WG wiki
  - Important to keep overall standard in mind
- 3. Development of full proposal
  - Latex version that fits into the standard
  - Creation of a github issue to track voting and a matching pull request
- 4. MPI forum reading/voting process

# The MPI Voting Process

### Quorum

- 2/3 of eligible organizations have to be present
- 3/4 of present organization have to vote yes
- Goal: standardize only if there is consensus

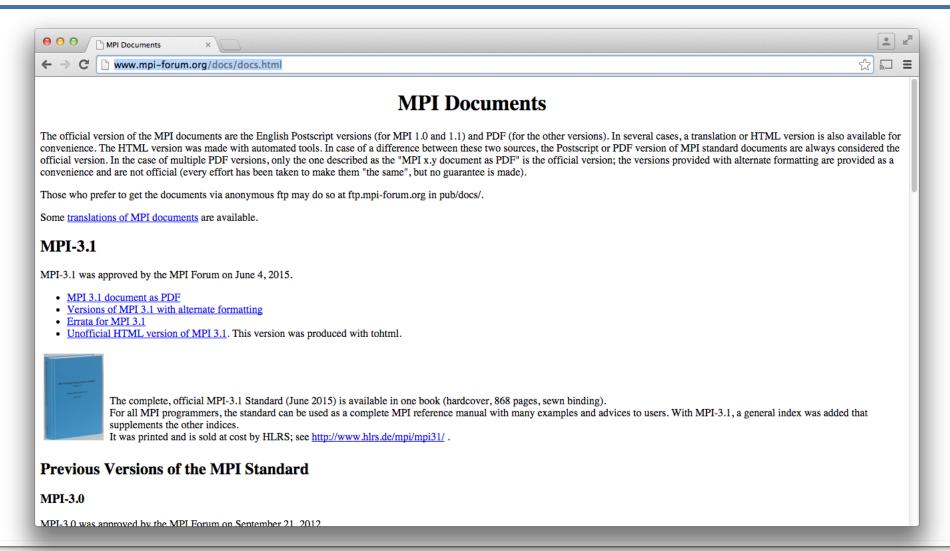

## Steps

- 1. Reading: "Word by word" presentation to the forum
- 2. First vote
- 3. Second vote
- Each step has to be at a separate physical meeting
  - Ensure people have time to think about additions
  - Avoid hasty mistakes, which are hard to fix
  - Prototypes are encouraged and helpful to convince people
- Separate (extended) rules for document votes

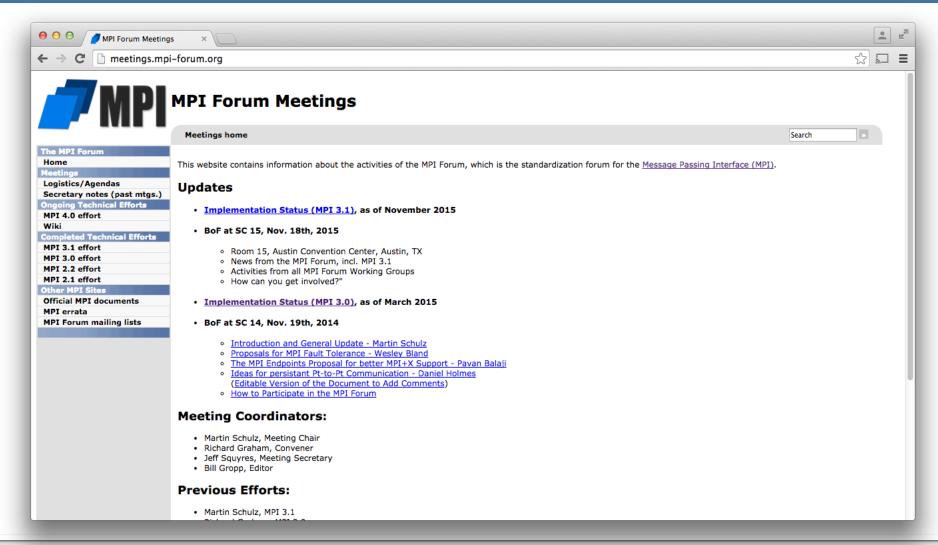

## How To Get Involved

- Submit comments to the MPI forum
  - mpi-comments@mpi-forum.org
  - Feedback on prototypes / proposals as well as the existing standard
- Subscribe to email lists to see what's going on
  - Each working group has its own mailing list
- Join a working group
  - Check out the respective Wiki pages
  - Participate in WG meetings (typically phone conference)
  - Contact the WG chairs to introduce yourself
- Participate in physical MPI forum meetings
  - June 2016, Bellevue, WA, USA
  - September 2016, Edinburgh, UK
  - Logistics and agendas available through the MPI forum website
  - Drop me an email if you have questions or are interested
- More information at: http://www.mpi-forum.org/

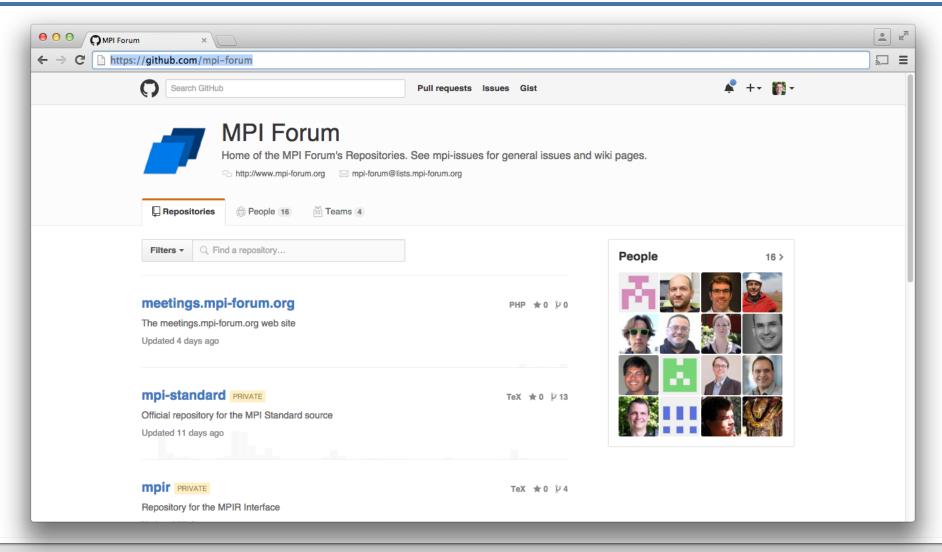

## http://www.mpi-forum.org/docs/docs.html

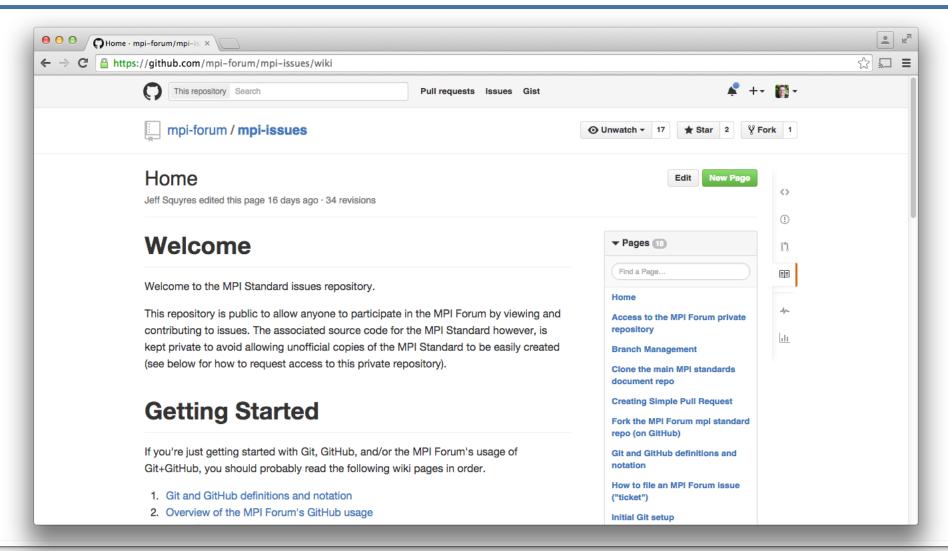

# http://meetings.mpi-forum.org/

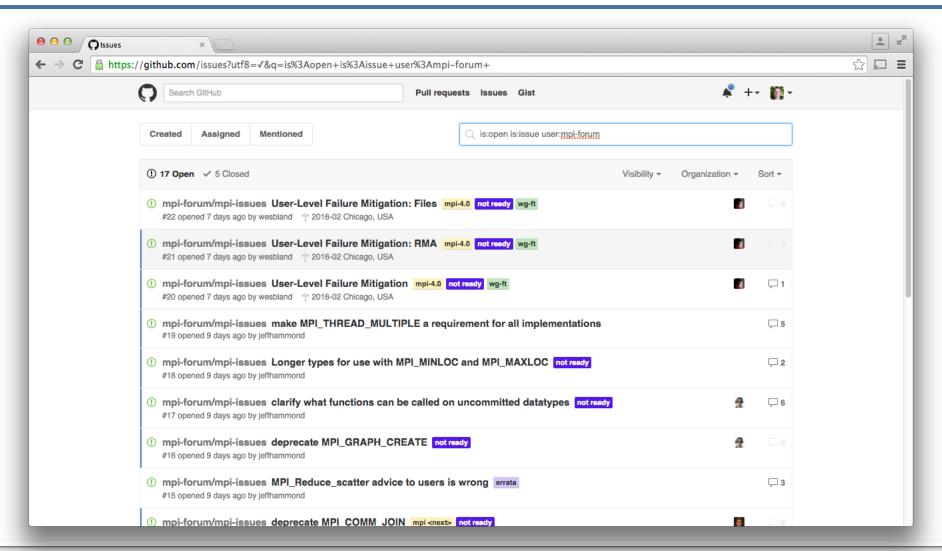

# GitHub Organization https://github.com/mpi-forum

# https://github.com/mpi-forum/mpi-issues/wiki

# Open Tickets/Issues Search/filter for: "is:open is:issue user:mpi-forum"

# www.EuroMPI2016.ed.ac.uk

- Call for papers open by end of November 2015
- Full paper submission deadline: 1st May 2016
- Associated events: tutorials, workshops, training
- Focusing on: benchmarks, tools, applications, parallel I/O, fault tolerance, hybrid MPI+X, and alternatives to MPI and reasons for not using MPI

# Summary: The MPI Forum in a Nutshell

- MPI Forum is an open forum
  - Everyone / every organization can join
  - Want/Need/Encourage community feedback
- MPI Forum rules are public
  - Available on the MPI forum web site
  - Under open source license (!)
  - If reused, please let us know and help us evolve them!
- Major work in the next few years on MPI 4
  - Several major initiatives, incl.
    - Fault Tolerance
    - Better support for hybrid programming
    - Performance Hints and Assertions
  - Many other proposals as well

www.mpi-forum.org

- Get involved in MPI
  - Let us know what is needed for climate and weather codes
  - Provide a user perspective and a balance to MPI implementors
  - Help close these gaps!
