Programming Methods on Sunway

OpenACC
More Science, Less Programming

The first real-world Application on Sunway system

Target Application: CAM

CAM presents the level of complexity of around 750,000 LOCs, over 300 kernels with no obvious hotspot

Selected Platform: TaihuLight

Based on a brand new many-core CPU with 260 cores, LDM instead of cache, few application/software support

Tsinghua University

Tools for OpenACC Implementation

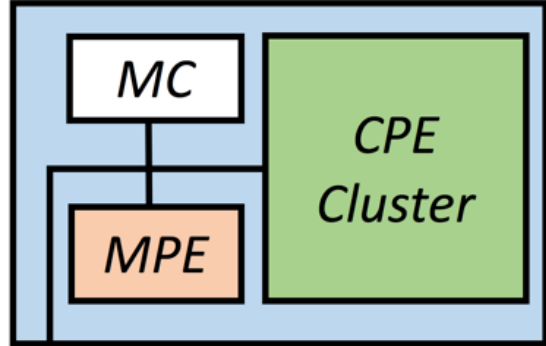

Target Application: CAM

*CAM presents the level of complexity of around 750,000 LOCs,
over 300 kernels with no obvious hotspot*

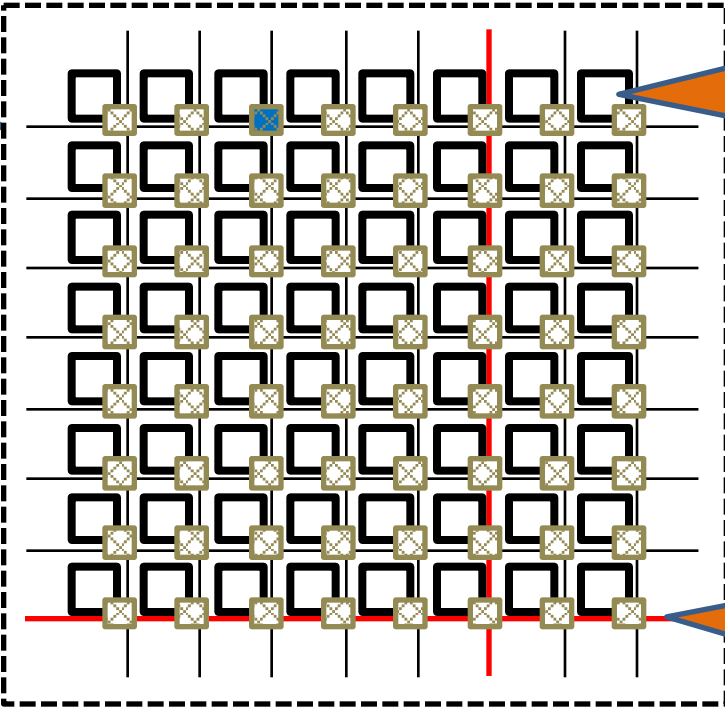

Parallel scheme using 64 CPES

Heterogeneous arch.

*One CPE
64 KB Local data
memory (LDM)*

*Between CPE
Fast register
communication*

Array Transposition by Register Communication

On-the-fly Matrix Transposition

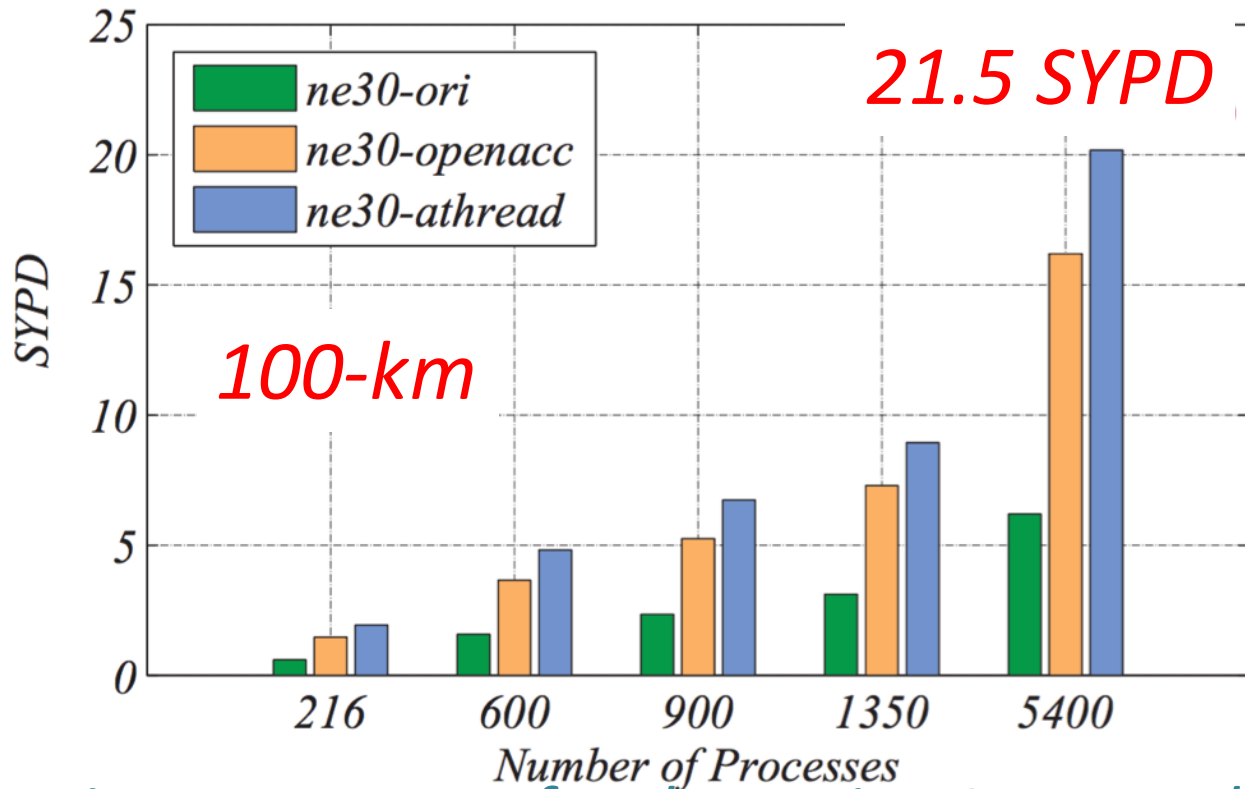

Matrix-Matrix Multiplication

Register communication
(~10cycles)

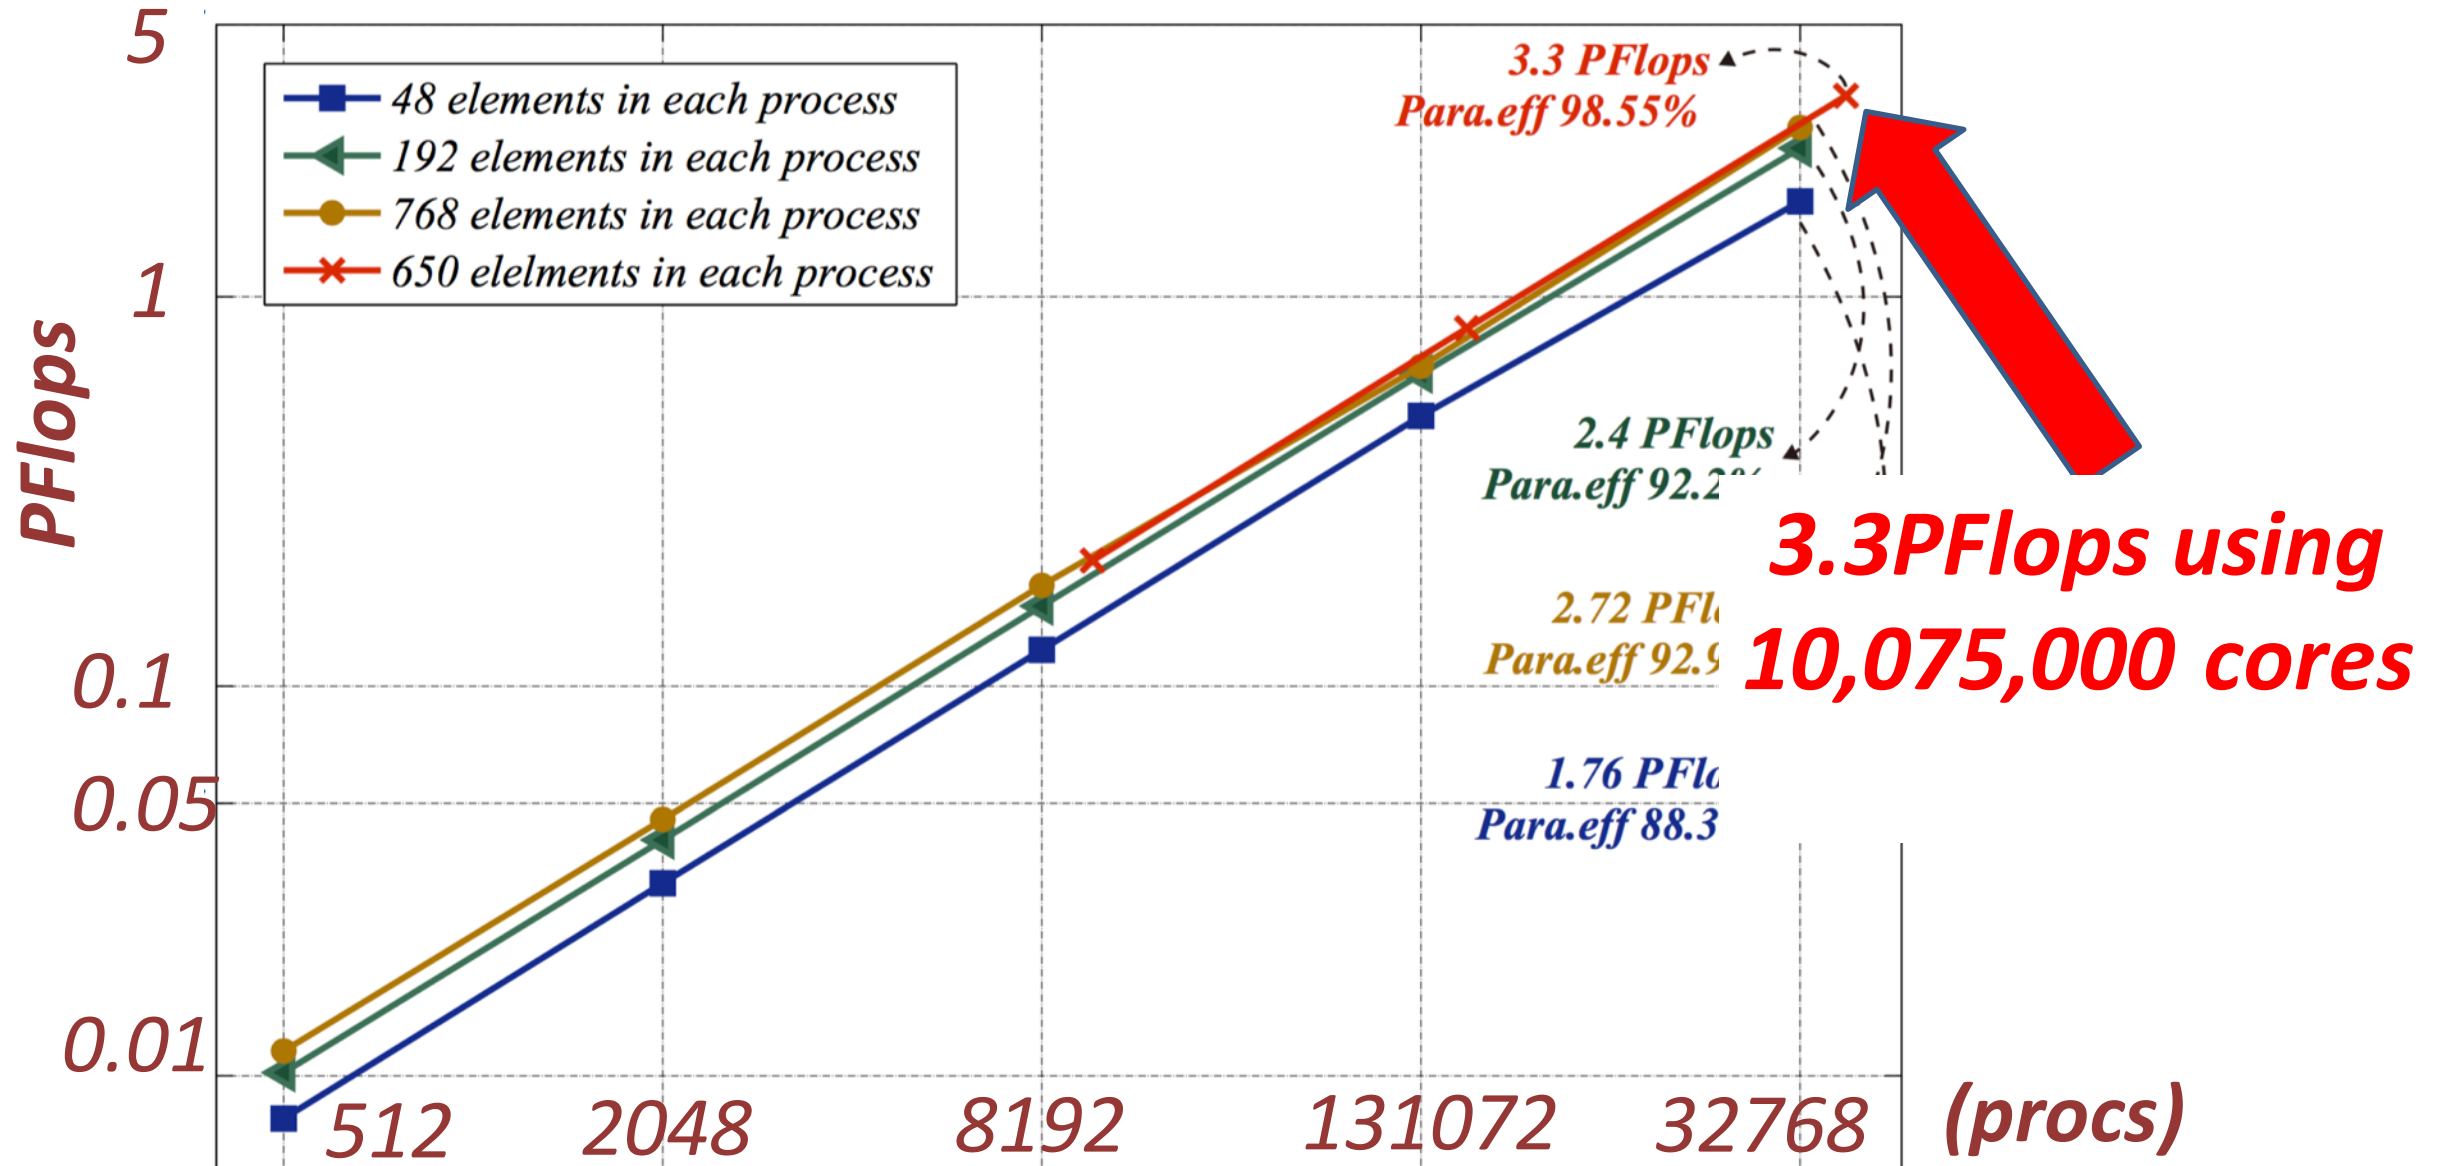

Performance Speedups for CAM on TaihuLight

The performance improvements for the entire CAM model in ne30 and ne120. ori refers to the original version based on MPE, openacc refers to the usage of OpenACC directive, and athread refers to the further usage of Athread.

CIESM (Community Integrated Earth System Model)

- Thermal Roughness Length Scheme
- New Soil Texture Database
- Matrix Approach of C Decomposition

- Modified ZM Convection
- Single-Ice Cloud Physics
- PDF Cloud Micro-Physics
- Four-Stream SW Radiation
- Subgrid Orographic Drag
- Cloud Dispersion
- Self-developed Dynamic Core

- Wave Induced Mixing
- Stocks' Drift
- Wave Roughness

- Conformal Mapping Horizontal Grid
- Highly Scalable PCSI Solver
- A New Air-Sea Flux Parameterization
- Modified Canuto Vertical Mixing
- Sublayer Parameterization
- Wind Speed Dependent Albedo

- Self-developed C-Coupler2
- Interactive Ensemble
- Mutil-Model Multi-Process Coupling Platform

- Floe-size Dependent Lateral Melting
- Salinity-dependent Freezing
